

fumio

A Ghost CMS theme.

Requirements

Ghost 4.20.0 or higher

Config

The package.json file contains the basic configuration like `posts_per_page` and responsive image sizes and a list of custom settings you can change from the Ghost Admin.

Install

To install the theme do the following: 1. Upload the theme zip file in your Ghost Admin. - check out the official guide for more details.

2. Upload the `routes.yaml` file.
 - Go to **Settings > Labs > Routes**
3. Adjust the Custom Settings
 - Custom settings are split into 3 categories: Site-wide, Homepage and Post
 - Go to **Design > Site-wide / Design > Homepage / Design > Post**

Additionally, you can change some global CSS settings in the `theme-settings.hbs` file in the `partials` directory.

Check out the official theme documentation for more information and details.

Development

The development environment consists of several gulp tasks. 1. `gulp css` Process the css files from 'assets/css' folder into a single file using PostCSS that will be used by the theme.

2. `gulp js` Compile the js files from 'assets/js' folder into a single file that will be used by the theme.
3. `gulp zip` This task compresses the theme files into `theme_name.zip` in the 'dist' folder.
4. The default task `gulp` or `gulp dev`. Runs a series of tasks necessary for local development/customizing.
